

Gluk Recipe

Ingredients : 1 cup of cornflour
Enough warm water to make a thick liquid
A few drops of food colouring

Method : Mix the water in slowly as the mixture changes thickness really quickly. If it gets too wet, just add more cornflour. Carefully stir in the colouring.

This is a simple slime and is lots of fun although very messy...best used with an apron (the food colouring can stain) and a plastic tablecloth...or in the garden!

Have fun letting it run through your hands but when you squeeze it, the gluk turns solid until you let it go!
